

Piramal Foundation

Founded: 2006

Sector: Education, Public Health, Governance, Livelihoods & Tribal Development

Piramal Foundation is the philanthropic arm of the Piramal Group, founded on the conviction that India's most intractable development challenges — in health, education, and governance — can only be solved by strengthening the public systems that serve the majority. Operating across 27 states and 2 union territories, the Foundation has impacted over 113 million lives in 16 years.

Guided by the philosophy of 'Doing Well and Doing Good' and rooted in the ethos of Sewa Bhaav — selfless service — the Foundation does not build parallel delivery systems. It embeds itself inside government, trains the middle managers who run schools and health centres, deploys youth fellows into aspirational districts, and de-risks innovation so that the state can own and scale it.

In the early 2000s, India faced a schooling crisis — 80 million children were dropping out, not because of a

lack of schools, but because of a lack of leadership inside them. Principals had no training. Block education officers had no tools. District health officers had no dashboards. The people delivering services at the last mile were invisible to the system above them.

Piramal Foundation was built on the insight that this 'midstream' gap — between policy designed at the top and communities served at the bottom — is where India's development stalls.

Core Programmes:

1. Anamaya — Tribal Health Collaborative

India's 104 million tribal citizens face the highest burden of preventable disease. Anamaya, in collaboration with the Bill & Melinda Gates Foundation, works in 177 tribal districts to build empathetic public health systems in partnership with tribal healers, communities, and state governments.

2. Aspirational Bharat Collaborative (ABC)

In partnership with NITI Aayog, the ABC works in 112 of India's most backward districts to improve health, education, and nutrition outcomes. The model embeds fellows in district administrations, uses technology to track convergence of government services, and ensures hyper-local accountability for last-mile delivery.

and inclusion through professional learning communities and live action projects.

3. Digital Bharat Collaborative

Digital Bharat Collaborative is committed to supporting the government to transform public systems and strengthen governance of programs by leveraging digital technology, thus enhancing citizens' experiences at the last mile.

4. Piramal School of Leadership (PSL)

PSL builds the leadership capacity of government middle managers — block education officers, district health officials, anganwadi supervisors — who are the critical link between policy and last-mile delivery. Anchored in the principle of Sewa Bhaav, PSL trains officials across education, health, climate, and inclusion through professional learning communities and live action projects.

5. Gandhi & Karuna Fellowship

The Gandhi Fellowship places graduates from India's top colleges and B-schools in district administrations for two years, working alongside government officials in education and health. Over 1,700 Fellows have been nurtured to date. The Karuna Fellowship equips rural women with digital, financial, and leadership skills, enabling them to participate in local governance and enter the organised workforce.
